# **INPROVED FABRIC & FIT**

## OUR BISON MECHANIC SHIRTS HAVE BEEN REVAMPED! NOW WITH IMPROVED FABRIC AND FIT!

#### **NEW 190GSM POLYCOTTON TWILL FABRIC**

The new and improved 190gsm Polycotton Twill fabric still has the same composition of polyester and cotton, 65% Polyester, 35% cotton, the difference is in the Yarn.

Woven fabric is made up of yarns crossing over in two directions Warp and Weft. Warp is the up and down yarn and weft is left to right yarn. The original shirt fabric had 100% polyester going one direction and 100% Cotton in the other direction. The makes the fabric shiny and can be uncomfortable as the polyester can feel stiff and crispy.

Our new Bison Mechanic Shirts use a blended polycotton yarn which is part polyester and part cotton, spun into one yarn. A fibre

blend like polycotton improves the properties of both components. The polyester makes the cotton stronger by 'protecting' it, and the cotton lends it's comfort and breathability properties to the yarn.

Using a blended yarn in both the warp and weft of our woven polycotton improves the Comfort, Durability, and Performance of our Bison Mechanic Shirts!

#### **NEW FIT**

After feedback that these shirts were outdated and boxy, we've slightly altered the fit. The shirt will still feel the same and be comfortable in all the right places, but you'll notice they look better and move with you.
